

CSE6230 Final Project

Topic2:

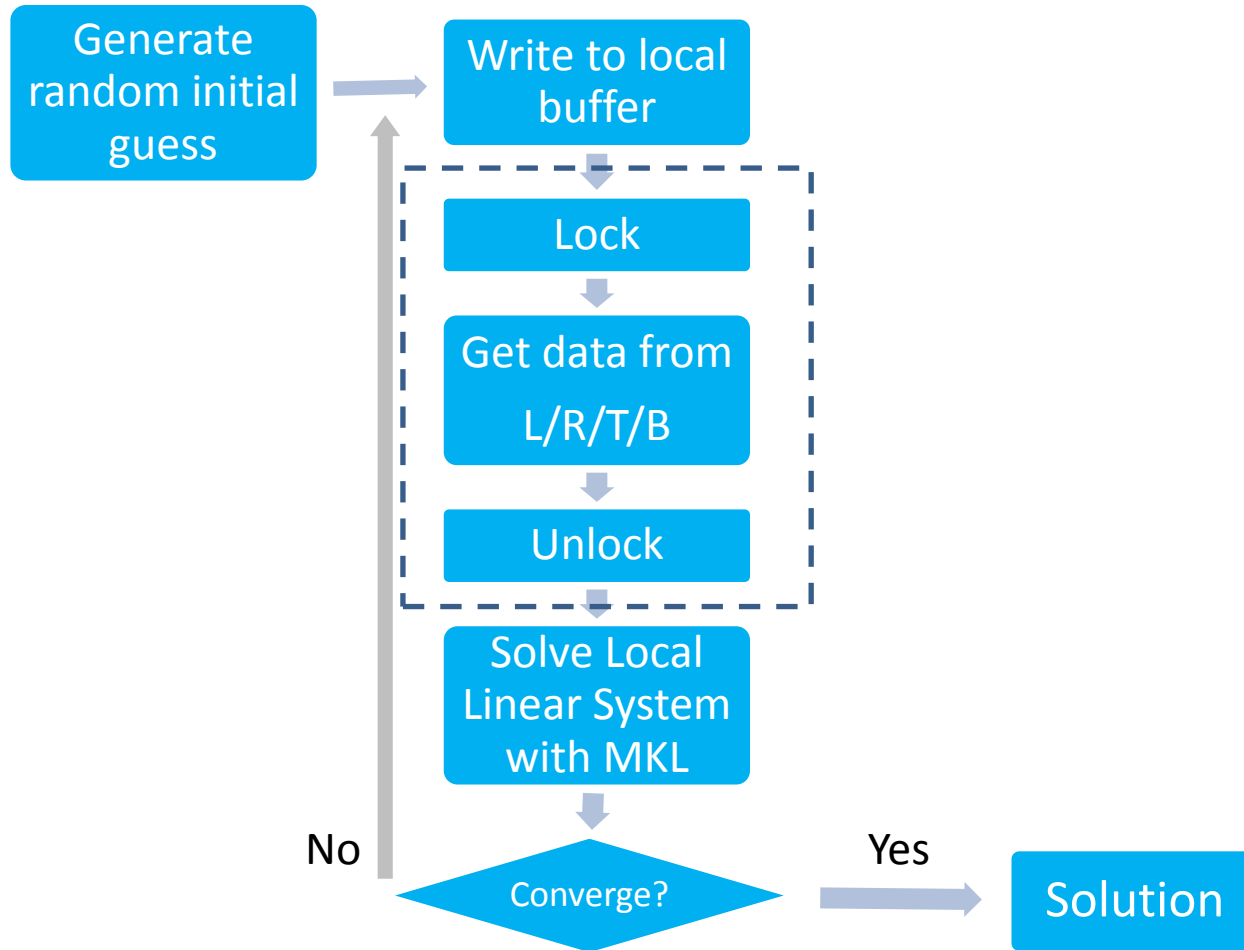

2D Jacobi Schwarz with MPI RMA and
multiple threads in MKL

Quick Review

- Grow the subdomain by k rows/columns
- Each subdomain only stores its local values
- Read expanded area from where it's originally stored

Work Flow

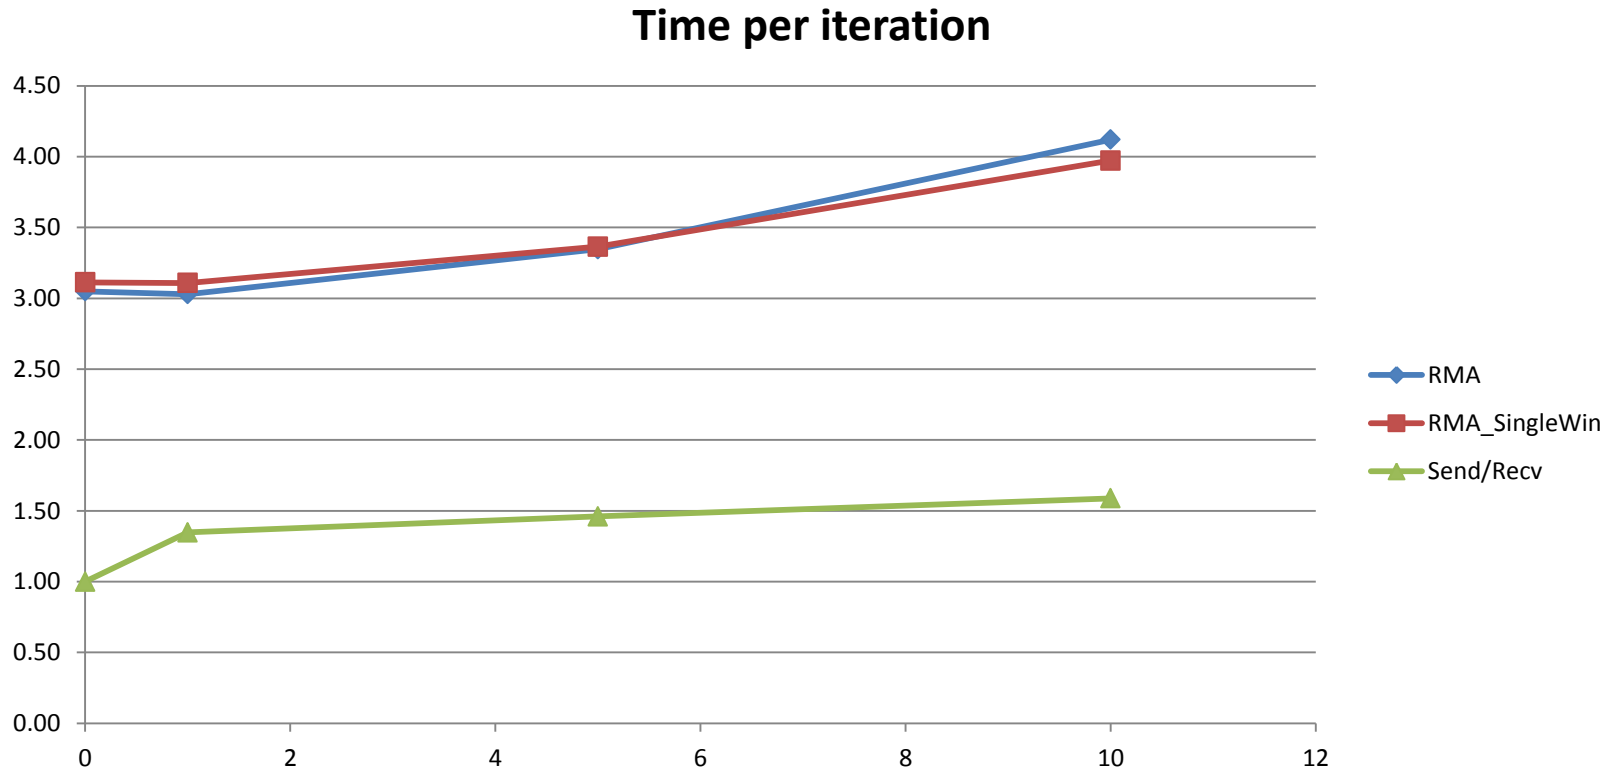

Shared Data

- In each process, 4 windows are available for remote access separately
- One process only reads from one window

Performance

- Gotham mic4 / 100 x 100 grid / 10 x 6 processes / 500 iterations
- 1 thread per process

Performance

Multiple Threads in MKL

- Gotham mic4 / 100 x 100 grid / 10 x 6 processes / 500 iterations

Further improvement

- Optimize space complexity
 - Eliminate unnecessary buffers
- Analyze runtime and find the bottleneck
